

Video Transcript for Module 1A: Best Practices for working with Data.

Hi guys, in this movie will be looking at best practice for creating data sets in Excel.

When it comes to creating automated reports and dashboard in Excel, a good practice is to structure your data in tables.

Right. And one might wonder why tables are so useful, why are they great to use in data analytics, and I'll share a few of those points you with us.

So, the first benefit for working with tables is it enables us to do things efficiently and save time in that process.

Right. And then the next point is it also makes it easy for us to automate our data for analysis and reporting, using tools like pivot tables, pivots charts.

And then the final point is tables are a darling for advanced analytical tools like Power query and other Business Intelligence Tools.

So again, it's all about productivity and supercharging our work.

In the next movie, we'll be looking at the golden rules for working with tables. See you then.
